

## Needs Analysis

List your core manufacturing processes. (*IMM, Roll form, Extrusion, Milling, Stamping, Coating, CNC, Assembly, Packaging, etc.*)

What are your known areas of pain? How do you prioritize them? (*Missing visual data for decision making and operations, central dashboards, linking assembly stations to print database, cascading project lists, multiple disconnected spread sheets or systems, etc.*)

What are your known areas of opportunity? (*Visual plant gages, real time data, eliminating duplicate entry, workflow automation, integrating information from multiple systems, improve information organization, etc.*)

**Propose specific shifts to the current App Suite in order of priority.**
